

ADDIFERM®

Rumen Mix

The rumen digestibility booster

Fresh cows and the first third of lactation

High fiber content in forages

High dry matter in forages

Rations of high yielding cows often contain high amounts of concentrates. This leads to acidification of the rumen fluid, impaired rumen fermentation and a decrease in the digestibility of the feed.

OUR SOLUTION

ADDIFERM® Rumen Mix

- Reducing the oxygen concentration in the rumen
 - a. the population of cellulolytic bacteria grows
 - b. the fibre digestibility improves
- Improving of rumen microflora
 - a. better use of lactic acid
 - b. raise rumen pH
 - c. increase bacterial protein flow to the duodenum
- Increasing the digestibility of forage

When to use ADDIFERM® Rumen Mix?

- Fresh cows and high yielding cows
- Rations with high fibre content in forages
- High dry matter content in forages
- Heat stress

Feeding recommendation:

50 g of ADDIFERM® Rumen Mix per cow and day on top. The calculation of new ration is not necessary.
